

# SEED CATALOGUE

## 2024

**Dear customer,**

We are pleased to present our seed catalogue for 2024. We have improved our services this year too, and with the latest seed cleaning technology we have brought further focus on cleaning our seeds to PQ quality. We are still in a market with a shortage of seeds of several important species, and that is why it is important to ensure that our customers get the most out of the product, we supply.

In 2024, we expanded our organisation and thus increased the focus on both production and customers, and we are looking forward to presenting the new team.

Our seed catalogue provides an overview of a wide range of seeds for forests, Christmas trees, greenery, shrubs and hedge production. The prices are indicative, but if larger quantities or special needs are required and not included in this price list, we will find a solution.

Unless we agree otherwise, the goods are delivered as dry, shelf-stable seed purified to normal standards for forest seed. For most species we can now offer purification to a higher quality – even if you have bought seeds elsewhere.

On our website ([hdseed.eu](http://hdseed.eu)) you will find, among other things, descriptions of provenances and our seed sources. We are continuously updating this information.

We reserve the right for intermediate sales and printing errors.

If you have any questions, you are always welcome to contact us via the contact information below. We look forward to doing business with you.

Yours sincerely,

  
Thomas Toftgaard  
Division Director

## News

### PS Elite FP.690

Nordmann fir PS Elite FP.690 is composed of 11 selected plus trees from the Tversted pool, all tested at 10 different locations in Denmark. The material has its origins in the 2 chosen stands in Tversted.

The selection criteria have been needle retention after harvest, high Christmas tree yield, late emergence and that parts of the material will be less susceptible to aphid attacks.

PS Elite FP.690 is a 1.5 generation seed orchard, and the offspring of the seedling is expected to give an increased Christmas tree yield of 16-18 % compared to the starting material. Furthermore, the material will be improved in terms of needle retention after harvest, measured for the months of October and November. Other properties such as later emergence and less susceptibility to aphids will also be improved compared to the starting material.

PS Elite FP.690 is genetically identical to the already marketed PS Elite FP.670, which from 2024 is also organically certified. There are now 13 hectares of PS Elite Nordmann fir seed orchard in production.

### Tveden F.824

Nordmann fir Tveden F.824 originates from Ambrolauri, Tlugi, Georgia, where the seed was harvested in the period 1979-1981.

The seed stand was established as a normal Christmas tree culture with a number of plants corresponding to 4-5,000 trees per hectare. When the trees reached Christmas tree size, the best Christmas tree types were selected as permanent trees for the future seed breeding.

The offspring of the seed breeding stand Tveden F.824 is expected to be improved compared to the starting material. The improvement is estimated to be up to 3-5 % more ON (Original Nordmann) trees per hectare.

Selected plus trees in Tveden F.824 have been used in the establishment of Sønderskovgård FP.246 and Skibelund FP.266.

## Pre-treatment

At HD Seed, we can help with pre-treatment of the seed. Most seeds are naturally dormant and require pre-treatment to ensure sufficient and even germination. The different species have different needs for pre-treatment.

During the pre-treatment, the seed is continuously monitored to ensure that the correct conditions – both in terms of humidity and temperature – are present. We continuously take germination samples of the seed during the pre-treatment and inform about the germination capacity at the latest on delivery.

Short-term pre-treatment, 1-3 months – EUR 7.50/kg

Long-term pre-treatment, up to 12 months – EUR 39.00/kg

Pre-treatment requires that the order has been received on time, so that the seed can be ready for sowing.

## Other services

We are helpful in processing external seed lots. Contact us for quotations.

## PQ cleaning

For an increasing part of the seed produced, the highest possible quality is required for sowing in plug/container. This is achieved by means of a subsequent cleaning with a series of special-purpose machines. Here the aim is to achieve the highest quality in terms of vitality and purity and a uniform size, weight and colour. We continuously invest in technology to improve the result.

## Analyses

We regularly carry out seed analyses in our laboratory to ensure the quality of the seed produced. Germination analyses are made as well as registration of quality data such as purity, moisture content, 1,000-grain weight and vitality.

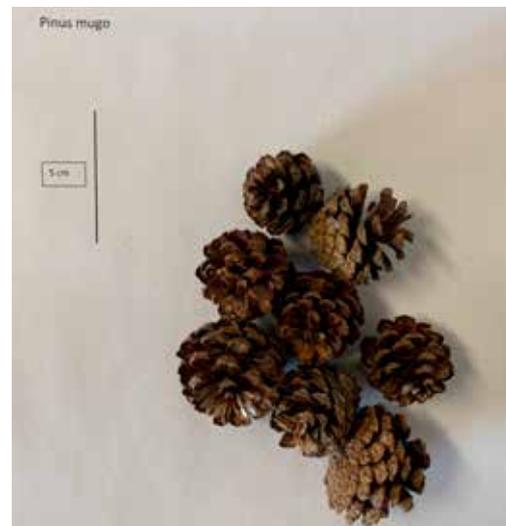

## Storage

We are happy to store both purchased seed lots and external seed lots in our cold stores.

## Additional products

We also sell cones and cone scales.

Contact [info@hdseed.eu](mailto:info@hdseed.eu) for further information on this.

## Seed quality

- S Standard quality. Meets our minimum requirements to the seed lot.
- S+ Standard+. Further cleaning has been carried out. Increased vitality and purity.
- PQ** Plug Quality. The highest possible quality. Particularly suitable for production in plug/container.

## Abbreviations/symbols

- F Seed source approved by the Danish Agricultural Agency.
- FP Seed orchard approved by the Danish Agricultural Agency.
- L Landscape-selected seed orchard or seed plantation.
-  Hedge or non-forest purpose.
-  The provenance is suitable for the production of Christmas trees or greenery.
-  State controlled organic.
- Seed/kg Live seed per kg based on germination, tetrazolium or cut test.
- V Vitality is stated where there was no germination result available at the time of publication of this catalogue.
- PQ** Plug quality. Seed cleaned to particularly high vitality and purity. Particularly suitable for use in container production.
- NEW** New seed source.

## Other sales conditions

- Minimum sales: 100 g per batch.
- The price per 1 kg applies from ½ kg and up. For larger quantities, please inquire.
- Where the status of the provenance appears as 'pending', the price is indicative.
- Delivery ex factory. Freight prices are continuously adjusted according to applicable fuel surcharge.
